

MEGAFRAME successfully completed - SPADnet follow-on project launched

[MEGAFRAME] 2010: MEGAFRAME was successfully completed (see also MEGAFRAME Final Report , MEGAFRAME D6.4 Laboratory fluorescence microscopy demonstrator), but work using the MEGAFRAME32 (32x32) and MEGAFRAME128 (128x160) devices has continued, as you can also see from the Publications section.

MEGAFRAME32 is being distributed by Photon Force Ltd (contact: Richard.Walker@photon-force.com).

In parallel, the follow-up FP7 ICT SPADnet project (www.spadnet.eu) has been launched, dedicated to the use of SPAD arrays in medical imaging, most notably Positron Emission Tomography (PET), building on the MEGAFRAME scientific and technological achievements.
